

①

Floating button , available on
Screen everytime as long
as the app
is running
on the
Background.

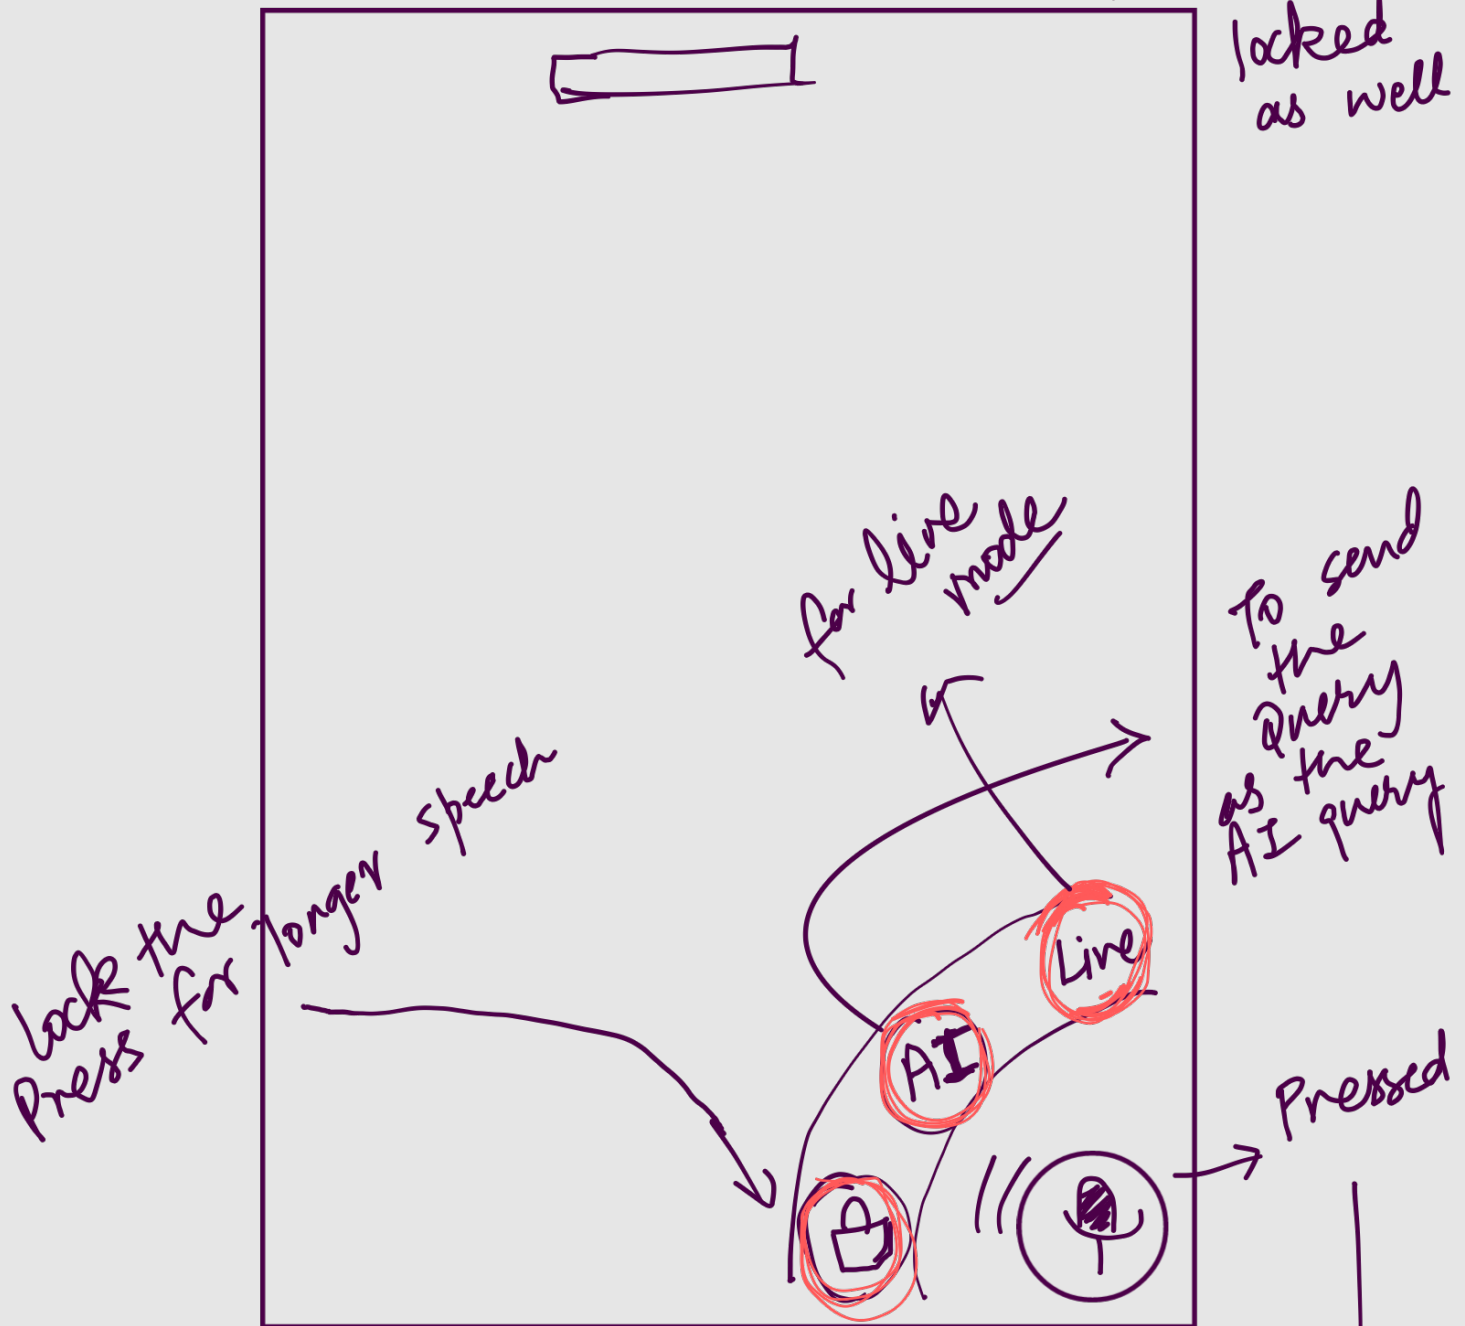

Press it

This app will allow the user
on any android device to write
without typing.

(2)

Pressed mic means its listening
but mode can be changed as
well, Pressed can be

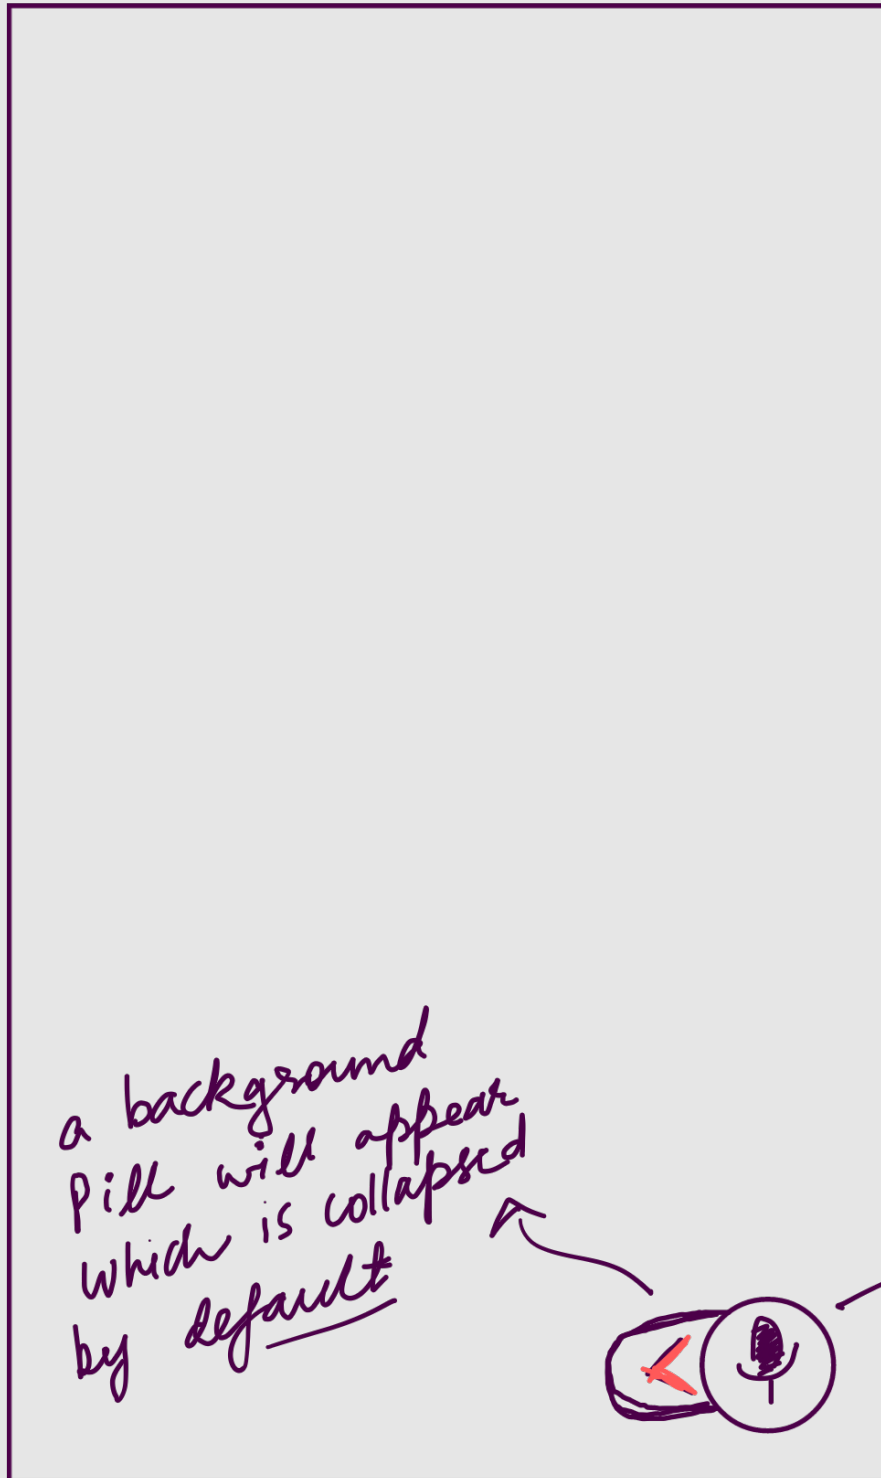

locked
as well.

When its pressed,
→ There is a haptic
feedback on holding it

→ slight wave animation that
shows that its listening

- ③ There should be a way to open app/
configuration from the floating button
as well

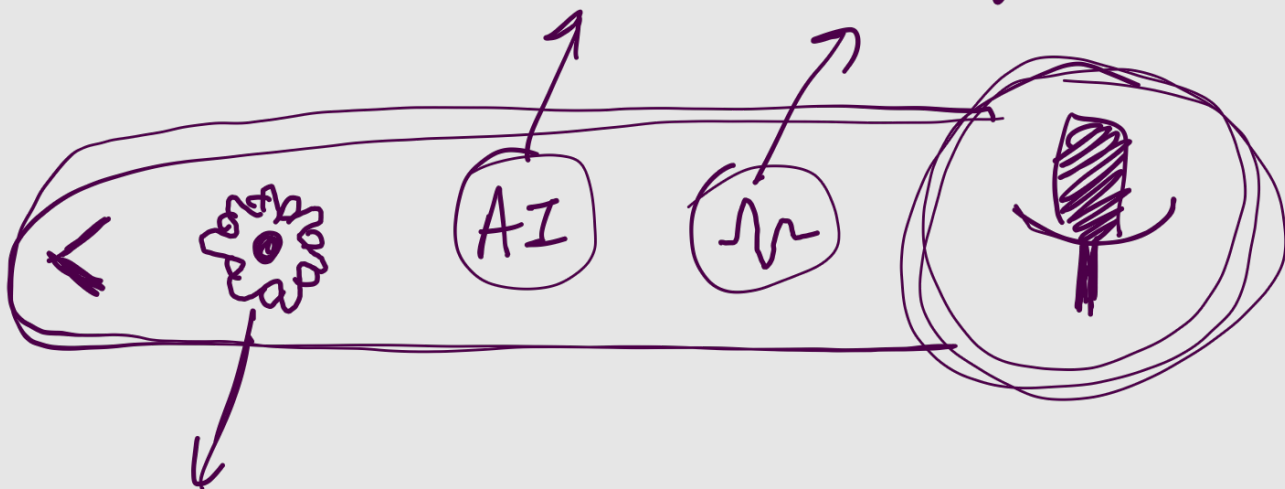

when
tapped
twice
within the
interval
of half a
second

(If AI is default
the button will be
shown selected)

Button
default to
AI

default to
line mode

Setting
(opening the
app configuration
where they can
change the provider/model)
